

WHAT MAKES HANDI HERRING, A FISH?

I want to know what makes me a fish!

eyes
mouth
skeleton
fins
gills

We are looking at her through special x-ray vision to see how she is made. Can you label the parts of Handi that make her a fish?

Did you know fish use their gills to breathe oxygen underwater? As the water passes over the gills, oxygen is carried into the fish's blood and travels around the fish's body!
